

Alert Ticket

Ticket ID	Alert Message	Severity	Details	Ticket status
A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated

Ticket comments

The alert indicates that an employee downloaded and executed a malicious attachment received through a phishing email. Several inconsistencies raise suspicion: the sender's email address ("76tguy6hh6tgftrt7tg.su"), the name referenced in the message body ("Clyde West"), and the displayed sender name ("Def Communications") do not align. Additionally, both the subject line and the email content contain noticeable grammatical errors, which are common indicators of phishing attempts. The message included a password-protected attachment ("bfsvc.exe"), which was subsequently downloaded and opened on the compromised system. A prior hash analysis confirms that this file is associated with known malicious activity. The alert has been assigned a medium severity level. Based on these observations, the case has been escalated to a Tier 2 SOC analyst for further investigation and response.

Additional information

Known malicious file hash: 54e6ea47eb04634d3e87fd7787e2136ccfbcc80ade34f246a12cf93bab527f6b
